

ASSIGNMENT (4)

1. Agile methods were created mainly because:

- a) Organizations needed more documentation
- b) Traditional methods had too much overhead
- c) Coding became less important
- d) Waterfall became faster

2. Agile methods mainly focus on:

- a) Heavy documentation
- b) Strict planning
- c) Delivering working software quickly
- d) Reducing customer involvement

3. Which value is part of the Agile Manifesto?

- a) Tools over individuals
- b) Documentation over working software
- c) Customer collaboration over contract negotiation
- d) Following a plan over responding to change

4. Agile development assumes that:

- a) Requirements will stay stable
- b) Requirements will change frequently
- c) Customer feedback is unnecessary
- d) Design must be completed before coding

5. Agile methods work best for:

- a) Large distributed teams
- b) Small to medium co-located teams
- c) Projects requiring heavy regulation
- d) Projects with long, fixed lifetimes

6. A disadvantage of agile methods is:

- a) Too much documentation
- b) Difficulty keeping customers engaged
- c) Slow delivery of software
- d) Lack of iteration

7. Agile development and maintenance: which statement is TRUE?

- a) Agile systems are always easy to maintain
- b) Agile does not support maintenance
- c) Minimal documentation may reduce maintainability
- d) Agile prevents change requests

8. In plan-driven development:

- a) No planning is required
- b) Stages and outputs are planned in advance
- c) Requirements always change
- d) Documentation is optional

9. Agile development typically:

- a) Separates specification from design completely
- b) Interleaves specification, design, and implementation
- c) Performs testing at the end
- d) Avoids customer feedback

10. Agile methods struggle when:

- a) Teams are small
- b) Customers are highly involved
- c) Systems are large and regulated
- d) Requirements change often

True / False Questions

1. Agile development welcomes changes in requirements.
2. Agile methods rely on extensive documentation.
3. Plan-driven development can still use incremental development.
4. Agile methods depend on strong customer involvement.
5. Agile methods are ideal for real-time systems with strict timing requirements.
6. Agile teams work best when co-located (in the same place).
7. Agile methods eliminate the need for skilled developers.
8. Agile methods reduce overhead by focusing on working software.
9. Prioritizing changes is simple when many stakeholders are involved.
10. Agile methods emphasize keeping the system simple.
